

# 7L SCT-501

## Secure Mobile OS with SCT Client

Communicate safely by using SCT-501 Mobile Phone

The SCT-501 mobile phone protects confidential communication through a Secure Mobile OS with SCT Client.

7L SCT Communication Suite Software uses state-of-the-art encryption with key generation and management, through "Securosys HSM" and key storage on the 7L SCT-501 mobile phone.

## Useful for User

Taking into consideration the increasing digital threat sophistication and the immense responsibility of protecting the communication from eavesdropping and interception of thousands of users on a daily basis, SCT-501 acts as a necessity for a range of professionals and organizations that highly value their privacy, such as:

Governments & Embassies

Corporations & Executives

VIPs

## Challenges

SCT-501 consists of the Secure Mobile Core System, which includes the VPN Server, Application Server, Firewall, and HSM.

The secure and hardened Mobile OS free of malware, viruses and several attack vectors can compromise the security of your mobile OS.

The Secure VPN Tunnel establishes a highly secure and encrypted connection with the corporate headquarters, manages strong data protection and prevents privacy theft.

Secure OS updates, that are performed, reviewed and controlled by the customer.

Secure application delivery, via a fully controlled private marketplace on client's premises.

VoIP Communication protected via Secure IP encryption.

## Advantages

SCT-501 is a mobile phone with a hardened operating system that guarantees maximum security, combined with a user-friendly environment.

SCT-501 provides fully encrypted:

- Video
- Texting
- Email
- Data
- Data-Sharing
