

7L SCT-801

SCT Portable Encryptor with 3G / 4G / 5G / Wifi

Work Safely & Efficiently by using SCT-801

SCT-801 is a portable encryptor. It establishes secure connections through the Secure 7L VPN that can be established between various types of sensitive devices (laptop, telephone, etc), through 3G, 4G, 5G and WiFi.

Useful for User

Taking into consideration the increasing digital threat sophistication and the immense responsibility of protecting of thousands of users on a daily basis, SCT-801 acts as a necessity for a range of professionals and organizations that highly value their privacy, such as:

Government Organizations

Large Enterprises

Challenges

SCT-801 contains a Secure VPN Tunnel and HSM.

The Secure VPN Tunnel establishes a highly secure and encrypted connection with the corporate headquarters, manages strong data protection and prevents privacy theft.

Advantages

- Easy to use
- Runs on the 7L SecureOS implementation and connects automatically to the Secure 7L VPN
- Provides important and useful information about all the connected devices and their connection status
- 2 Ethernet Ports for configuration
