

Transaction Security Broker (TSB) Approval Framework

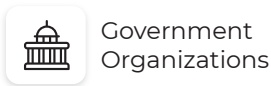

A secure solution that can provide a peace-of-mind, automated security process.

The Transaction Security Broker (TSB) / Approval Framework solution enables you to protect financial and digital assets through an end-to-end transaction security system. Create a secure decision/approval framework that will enable your organization to streamline decision-making.

Useful for User

Taking into consideration the increasing digital threat sophistication and the immense responsibility of protecting the communication from eavesdropping and interception of thousands of users on a daily basis, TSB acts as a necessity for a range of professionals and organizations that highly value their privacy, such as:

Government Organizations

Large Enterprises

Financial Services

Challenges

The Transaction Security Broker (TSB) contains 7L Secure Mobiles and HSM.

7L Secure Mobiles provide a secluded environment with no access points for malicious breaches and complete immunity to physical assaults, like theft. Additionally, 7L Secure Mobile App for Digital Transactions allows the user to easily communicate with TSB and return a truly secure and verified feedback to the server.

Avoid unauthorized approvals via the security provided by the secure and verifiable flow of the Transaction Secure Broker.

Advantages

- Easily integrate an Approval workflow to your existing business and financial services.
- Financial transaction requests.
- Digital signatures.
- Access authorization
- Digital Democracy: Multi-user approval for organizations that demand a specified majority to authorize a request.
